

MY PERSONAL PLANNER

DATE:	15/4/2026	SUBJECT:	ICT
-------	-----------	----------	-----

Class/stream:	GRADE 10
Topic/sub-topic:	CONNECTIVITY
Lesson title:	INTRODUCTION TO NETWORKS

Lesson Objectives:

At the end of the lesson, learners should be able to:

Define the term 'network', State and explain/differentiate major types of networks, Differentiate the two types of network models and Discuss the benefits and drawbacks of networks

Summary of Concepts / Activities / Assignments:

★ Network: a group of computers connected together.

Types of networks

1. Local area network (LAN) - *Connects computers within a small region e.g a room*
2. Wide Area Network (WAN)- *connects computers over a large region. e.g a country*
3. Personal Area Network (PAN)- *connects digital Devices within the range of an individual*
4. Tethering- *enable a host device to share it's broadband connection.*

Benefits of using networks

- Access to shared peripherals
- Access to shared storage and data
- Flexible access (access from any device on a network)
- Communications (messages & files can be sent within the network to other computers)
- Shared access to the internet

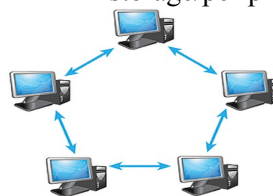

Drawbacks of using networks

- Malware can easily spread
- Security and privacy issues (networks can be hacked)
- Components can be expensive

Network models

There are two types of network models

- 1) **Peer-to-peer**: computers in this model share their resources directly to each other but do not access servers
- 2) **Client-server**: It has a server for; controlling user access rights, centralized administration, centralized backup and access to shared storage/peripherals

Peer-to-peer

client-server

Assignment

- Define the term 'network'
- State and explain major types of networks
- Differentiate the two types of network
- Discuss the benefits and drawbacks of networks

Materials / Equipment / teaching aid:

Projector/interactive board
ICT LAB
